PROFILE

Backend engineer with 10+ years of experience building scalable, high-performance backend systems using Java (Java 17) in distributed environments. Hold a bachelor's degree in computer science with strong foundations in data structures, algorithms, and backend architecture. Experienced in designing and developing microservices, evolving system architecture, and improving existing platforms. Strong focus on writing clean, maintainable code with TDD, DDD, and CI/CD practices. Hands-on with PostgreSQL, cloud-native deployments on GCP and Kubernetes, and system observability using tools like Grafana and Prometheus, with attention to performance, reliability, and correctness. Comfortable working in fast-paced, product-focused teams, learning new domains quickly, and collaborating closely with engineers to deliver robust financial-grade systems at scale. Fluent in English and motivated by solving complex engineering problems with simplicity and clarity.

PROFESSIONAL EXPERIENCE

Sep 2024 –
present
Pune, India

Senior Software Engineer, Netcracker Technology

- Currently working in the R&D department at Netcracker, contributing to a landscape of 200+ microservices built in Java and Go.
- Ownership: Achieved ownership of 2 microservices within just 3 months of joining, recognized for delivering "Far Exceeding Expectations" performance. Gained 2 more microservices after that
- Learning: Learnt Go in 30 days and actively implementing features in the language.
- On-site Release Support: Traveled to Almaty, Kazakhstan to provide direct support for the GFiber release, successfully resolving critical tickets and ensuring a smooth go live.
- Cross-Domain Orchestration: Successfully delivered a complex feature spanning 6 microservices in a single sprint. This was originally estimated for 3 sprints; I achieved this through efficient design and AI/GenAI tooling and prompt engineering with Cursor
- Discovery & Migration Logic: Designed and implemented the IPAM allocation logic specifically for Discovery and Migration use cases, allowing the system to differentiate between manual assignments and automated network discovery.
- Architectural Standpoint: I am part of internal Architecture group where developers bring their design and brainstorm it. For every release I work on 2-3 epics, where I prepare high level data and control flow diagrams, low level schema design and API specs for service-to-service communication. After discussions I implement my design. I have delivered **12 feature requests** from client till now.
- **Technologies**: Java, Go, Kubernetes, PostgreSQL, Spring Boot, Docker, Kafka

Dec 2021 –
Sep 2024
Pune, India

Senior Software Engineer, Veritas Technology LLC

- Alta View: I worked on SaaS platform called Alta View for Veritas which managed many netbackup (Veritas Product) servers, which was capable of taking real time backups of appliances like VM machines, Kubernetes, DB instances, cloud instances like EC2 in AWS
- Pass-Through API Framework: Designed and built a pass-through API framework from scratch with RBAC support to call direct GET APIs of Netbackup instead of keeping data locally and syncing it in real time.
- Server discovery: When netbackup server gets added to Alta View, it sends data in Kafka topics, I synchronized that in Alta View database by reading topics and ingesting in Alta View DB, and when server was removed from UI then I cleaned up data from Alta View
- Event driven data Ingestion & Synchronization: Sync-up data from Netbackup received via Kafka, ingest it into Alta View creating policies and protection plans. Successfully handled the ingestion of approximately 500,000 records per batch.
- Mentored junior engineers
- **Technologies**: Java, Spring Framework, PostgreSQL, Kafka, AWS, RabbitMQ, Angular

Feb 2020 –
Dec 2021
Pune, India

Senior Software Engineer, ZS Associates

- Pharma customer alignment: ZS has many clients and those clients have their customers located in different regions and cities in US; I worked on a product where all the customer information was stored and rendered on Google Map. This alignment data was huge in millions, DB was partitioned. I was responsible to design APIs, its specs request/response, and develop those APIs in Java as well as integrate those APIs in Angular.
- Feature development: I developed APIs for search and filter of customer alignments plotted on Map view. I also delivered grid view API based on map zoom level. Handled pagination and sorting in backend APIs.
- Full-Stack Transition: Mastered **Angular** within one month to integrate complex backend APIs with responsive front-end components, successfully transitioning into a full-stack developer role.
- Query optimization in PostgreSQL: I was part of 2 teams, 1 feature development and 2nd query optimization. As a part of query optimization I analyzed many Postgres queries, rewritten them, added indexes or changed strategies according to query plan (like use of CTE to reduce data set) and reduced **SLA to 2 seconds** to get response from each query.
- **Technologies**: Java, Spring Core, Angular, PostgreSQL, Git

Jan 2018 –
Feb 2020
Pune, India

Software Engineer, Loylogic Pvt LTD

- New client onboarding: Loylogic worked in loyalty points where user books ticket or hotel and gets points in return. Those points can be used to purchase other products or bookings. I was part of client onboarding team, where I was responsible to integrate loyalty platform with client's APIs. I gradually took overall control of the team, and I remained single point of contact for any queries related to client onboarding framework.
- Custom Logging Framework: Designed and built a custom logging library from scratch over Apache Log4j v2, reducing debugging time by 50% across all the products. I got appreciation for this and integrating it in all the products of Loylogic within the 6 months of joining the company.
- Ownership: I was given ownership of entire AWS China region to support client onboarding AWS price management and instance management.

- **Technologies:** Java, Spring, AWS, Log4j, Struts, JSP, PostgreSQL

Aug 2015 –
Jan 2018
Pune, India

Senior Systems Engineer, Infosys Limited

- Automated FBDI - Automated data loading processes using shell scripting, reducing manual effort by 60%.
- Rest Service Deployment - Deployed Rest Services of PL/SQL on Integrated SOA Gateway.
- **Technologies:** Java, Shell Script, PL/SQL

EDUCATION

Aug 2012 –
Mar 2015
Solapur, India

Bachelor of Engineering in CSE, Walchand Institute of Technology

- Graduated with distinction (73.5% aggregate).

Aug 2009 –
Mar 2012
Solapur, India

Diploma in Computer Technology, Government Polytechnic Solapur

- Topped final semester with an aggregate of 82.48%.

Jun 2008 –
Mar 2009
Solapur, India

SSC, N F Shaha Kothari High-school

- Topper in High-school with 88.61%

SKILLS

Programming Languages

- Java (10 years)
- Go (2 years)
- TypeScript (3 years)

Front End

- Angular 9+ (3 years)
- JSP (2 years)
- JavaScript (2 years)

DevOps

- Jenkins CI/CD (For Builds)
- Docker and Kubernetes (Beginner)

Development Skills

- Object Oriented Programming (OOPs)
- Domain-Driven Design (DDD)
- Test-Driven Development (TDD)
- SOLID Principles

Frameworks

- Spring Boot (8 years)
- Jersey (3 years)
- Hibernate (5 years)

Cloud Technologies

- AWS S3 (2 years)
- Console Logs (3 years)
- RDS, EC2 (3 years)
- Azure (Beginner)

Systems

- Kafka (4 years)
- RabbitMq (2 years)
- Maven (10 years)
- Grafana
- Gradle (Beginner)

Soft Skills

- Communication
- Team Collaboration
- Self-Motivated
- Work Independently

Sql

- PostgreSQL (7 years)
- PL/Sql (7 years)
- Query Optimization (5 years)

Problem Solving

- Data Structures
- Algorithms

Other

- Prompt Engineering
- Atlassian Jira
- Confluence
- Sonar code quality
- IntelliJ IDE
- VS Code

No Sql

- Arango DB (Multi model)

LANGUAGES

- English
- Hindi
- Urdu
- Marathi
- Kannada

AWARDS (CONSISTENCY)

Apr 2026	Spot Recognition, Netcracker Technology Recognition for continuous and consistent efforts to make deliver feature requests in this release
Jun 2025	Star Performer, Netcracker Technology Back to back second Star Performer award for completing complex feature
Jan 2025	Star Performer, Netcracker Technology Just joining after the organization picked up feature involving 6 microservices. Complete it in a single sprint which was estimated for 3 sprints with help of GenAI tools
Jun 2023	Veritas WOW Rewards, Veritas Technology LLC Awarded for delivery of features within scheduled delivery
Mar 2022	Veritas WOW Rewards, Veritas Technology LLC Got the appreciation for understanding and completing tasks just after joining the organization
Nov 2020	Extra Mile, ZS Associates Got "Extra Mile" for good performance
Mar 2019	Passionate, Loylogic Pvt LTD I got quarterly value award "Passionate" for dedication towards my work.
May 2018	Appreciation mail from CTO, Loylogic Pvt LTD Received recognition EMAIL from the CTO for developing a logging library, just joining the company
Jan 2015	Academic Achievements, College • Second prize in "Java battle ground" Coding event Orchi'Tech 2015 • Second prize in "Java programming" Coding event SVERY pandharpur 2015 • First prize in "Java battle ground" Coding event Orchi'Tech 2014 • Third prize in "Java Programming contest" Coding event WIT'CHAR 2014 • Topper in Diploma • Topper in High School
